WORK AND EXPERİENCE

NTT DATA Business Solutions Turkey (July 2022- Continues)

I worked as a back-end developer at this company, which provides consultancy services to clients from various industries and offers solutions tailored to their needs through projects developed using C# and .Net technologies. My responsibilities included producing solutions that align with client requests, writing clean and high-performance code adhering to SOLID principles, delivering tasks on time and in full, and collaborating effectively with team members involved in the same project.

Derimod (December 2017-September 2019)

I was responsible for the role of part-time IT assistant I gave technical support to stores.I undertook tasks such as installation, maintenance, updates and repair of computers, handheld terminals, barcode readers, barcode printers, routers and similar electronic devices

PROJECTS:

Sanovel Ilac Projects

I served as a back-end developer managing the operations of Sanovel Ilac, a subsidiary of the Toksöz Group. In projects developed with .Net Framework 4.5.2, I undertook both support and modernization tasks. Throughout the project, I utilized technologies and development tools such as Web Forms, MS SQL, Git, and JIRA.

BSH – Cosmos Modernization Project

I served as a back-end developer responsible for managing service operations in BSH's (Bosch-Siemens Hausgeräte) Cosmos Modernization project. I undertook the task of modernizing the project from .Net Framework 4.5.2 to .Net Core 6.0 version. Throughout this task, I utilized technologies and development tools such as ASP.NET Core MVC, HTML, CSS, MS SQL, Git, TFS, and JIRA.

TST-San Web Project

I served as a back-end developer on the factory production line automation project named TST-San Web. Throughout the project developed with layered enterprise architecture, I utilized technologies and development tools such as .Net Core 6.0, RESTful API, MS SQL, Git, and JIRA.

Koc Dialog Project

I worked as a back-end developer on Koç Holding's OKR (Objective Key Result) project, named Koç Diyalog Web. Throughout the project, I used technologies and development tools such as .Net Core, RESTful API, MS SQL, Git, TFS, and JIRA.

Sec Market Project

I worked as a back-end developer on the supply chain operations management project named SEC Market, which is a Yıldız Holding project. Throughout the project developed with layered enterprise architecture, I utilized technologies and development tools such as .Net Core 6.0, RESTful API, Oracle SQL, Git, and JIRA.
